The individual results are added for each currency, per contract, product and account. For cash settled options on futures the cash settlement of the net position is calculated by evaluating the strike price against final settlement price of the corresponding futures instrument.</p> <p>For cash settled stock options the cash settlement of the deliverable position is calculated by multiplying the difference of strike price and underlying close price by the number of underlying shares.</p> <p>Detailed security related information about the corresponding delivery is reported in CE770 report. The report may contain cash settlements resulting from exercise/assignment of a basket created due to a spinoff.</p> <p>The individual results are added for each currency, per contract, product and account.</p> <p>The report is available in xml- and csv-format.
